

## URN WALL POCKET

By Craig Nissen

Above; the production pink glaze with black flecks

The Urn is another 1956 introduction. The catalog number is "WP19". The wall pocket is 4-1/2 tall and 5-3/4" wide. The production glaze offerings were pink with black flecks and chartreuse with brown flecks.

Above is image of Catalog Listing # WP19

Left is the back of the wall pocket showing the "McCoy USA". This is the back of a gold trim piece as you can see the Shafer 23K Gold stamp, typical of how Shafer marked many of their gold trim pieces.

Right; the production chartreuse glaze with brown flecks.

The Urn wall pocket is not often found with damage. The design does not generally have a fragile or feature that has a tendency to be damaged. The dollar values of the production Urn wall pockets are usually modest with current estimate for value in the range of \$ 10-15.

Below we have examples of both of the production wall pockets with a nice gold trim decoration done by Shafer. Value either color: \$ 20-30

The example of the Urn wall pocket to the right has a significant amount of glaze miss areas on the surface of the piece. It is not known why but for some reason the design style of this piece seems to create a higher probability of notable glaze miss than other pieces in the wall pocket family. These “Oops” examples are not commonly found but when they are, the Urn seems to have the most dramatic examples.

Value: \$ 10-15
